

# Control Odors and Extend the Life of Cartridges in Waterless Urinals...

United 28

# AIR LOCK

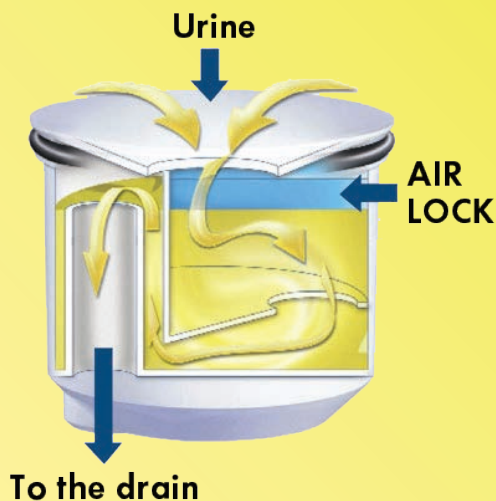

## Urinal and Drain Treatment

**AIR LOCK** floats on top of urine, water and other liquids to create an effective seal for use in waterless urinals and drains. Using **AIR LOCK**...

- Locks air out of the drain to prevent the creation of odors.
- Locks sewer gases and smells in the drain.
- Creates a protective barrier between the user and the fluids in the drain.
- Locks in savings on cartridge replacements.

### **AIR LOCK:**

- Earth Smart® Certified • Will not evaporate to 100°F • Will not freeze above -14°F
- Features fresh Cucumber Melon or our aromatherapy Sun-Kissed Orange fragrance.

Extending the life of waterless urinal cartridges is easy with **AIR LOCK**. As the original liquid seal barrier of the cartridge dissipates over time, simply replace by pouring in 3 – 4 ounces of **AIR LOCK** directly into the cartridge.

Talk to your United Representative about other products that can be used to clean the build-up in cartridges, like **United 577 ESA Urinal Line Renovator**, which further extends their use to lock in more savings.

**AIR LOCK** can also be used to control odors from floor drains, deodorizing the area while providing fresh fragrance options.
